deacetylase genes, used for producing transgenic plants which have increased disease resistance

Claim 1; Page 77-79; 87pp; English.

The present sequence encodes a maize histone deacetylase. This DNA belongs to family 2, ZmHD2 and appears to affect chromatin structure at promoters of RNA polymerase I and thus regulate ribosomal RNA production. The nucleotide sequence can be used to transform plants and increase disease resistance by altering the levels of heterochromatin, altering chromatin assembly, and gene activity of the transformed plants. Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are regulated by histone deacetylase.

```
The present sequence encodes a maize histone deacetylase . This DNA belongs to family 2, ZmHD2 and appears to affect chromatin structure at promoters of RNA polymerase I and thus regulate ribosomal RNA production. The nucleotide sequence can be used to transform plants and increase disease resistance by altering the levels of heterochromatin, altering chromatin assembly, and gene activity of the transformed plants. Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are regulated by histone deacetylase.
                                                                                                                                                                                                                                                New deacetylase genes, used for producing transgenic plants which have increased disease resistance

The protein is homologous to yeast RPD3 and HDAI. The polynucleotide sequence is used in the method of the invention. The specification describes a method for regulating gene expression in transgenic plants. The method comprises modifying histones by introducing chimeric nuclectide sequences which have regulatory elements in operative association with a gene of interest or with a nucleotide sequence encoding histone deacetylase. The method is useful for regulating the particularly for repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation). The method is also useful as a functional test for identifying a phenotype associated with perturbing a gene. The histone deacetylase genes are useful for altering the development of an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Methods for regulating gene expression in transgenic plants, e.g. repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation), comprises introducing genes encoding histone deacetylase

The present sequence encodes an Arabidopsis thaliana histone deacetylase designated AtHDA2B. The protein is homologous to yeast RPD3 and HDA1. The polynucleotide sequence is used in the method of the invention. The specification deacribes a method for regulating gene expression in transgenic plants. The method comprises modifying histones by introducing chimeric nucleotide sequences which have regulatory elements in operative association with a gene of interest or with a nucleotide sequence encoding histone deacetylase. The method is useful for regulating the developmental, physiological or biochemical pathway within a plant, particularly for repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation). The method is also useful as a functional test for identifying a phenotype associated with Methods for regulating gene expression in transgenic plants, e.g. repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation), comprises introducing genes encoding histone deacetylase Claim 9; Fig 2B; 91pp; English. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Lambda PRL2 ls a cDNA library derived from equal
quantities of 4 pools of mRNA. The mRNA sources were 1) 7
day germinated etiolated seedlings; 2) tissue culture
grown roots; 3) staged plants half with 24 hour light
cycle, half on 16 hr light, 8 hour dark- rosettes; 4)
same plants as 3 but aerial tissue (stems, flowers and
siliques. The vector is BRL's lambda 2ip Lox. The cDNA
inserts were directionally cloned with Sal-Not arms using
oligo dT primed cDNA.

/clone_lib-liambda Zip-Lox; Site_l: Sal; Site_2: Not;
/clone_vVector: lambda Zip-Lox; Site_l: Sal; Site_2: Not;
/clone_lib-liambda library derived from equal
quantLitles of 4 pools of mRNA. The mRNA sources were 1) 7
day germinated etiolated seedlings; 2) tissue culture
grown roots; 3) staged plants half with 24 hour light
gycle, half on 16 hr light, 8 hour dark-rosettes; 4)
same plants as 3 but acrial tissue (stems, flowers and
siliques. The vector is BRL's lambda Zip-Lox. The CDNA
inserts were directionally cloned with Sal-Not arms using
oligo dT primed CDNA.

                         The present sequence represents Arabidopsis thaliana histone deacetylase designated AtHDASB. The protein is homologous to yeast RPD3 and HDA1. The polynucleotide sequence is used in the method of the invention. The specification describes a method for regulating qene expression in transgenic plants. The method comprises modifying histones by introducing chimeric nucleotide sequences which have regulatory elements in operative association with a gene of interest or with a nucleotide sequence encoding histone deacetylase. The method is useful for regulating the particularly for repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation). The method is also useful perturbing a gene. The histone deacetylase genes are useful for altering the development of an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents Arabidopsis thaliana histone deacetylase designated AtHDA2A. The protein is homologous to yeast RPD3 and HDA1. The polynucleotide sequence is used in the method of the invention. The specification describes a method for regulating qene expression in transgenic plants. The method comprises modifying histones by introducing association with a gene of interest or with a nucleotide sequence which have regulatory elements in operative encoding histone deacetylase. The method is useful for regulating the developmental, physiological or blochemical pathway within a plant,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Methods for regulating gene expression in transgenic plants, e.g. repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation), comprises introducing genes encoding histone deacetylase
                                                                                                                                                                                                                                                                                                                                             Histone deacetylase; AtHDA2A; RPD3; gene expression; transgenic plant; HDA1; ethylene-responsive phenotype; hypocotyl elongation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        : ||: |||||||||||| | :|:|:|||||| ; | ::|: | |||

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               particularly for repressing ethylene-responsive phenotypes (e.g. inhibition of hypocotyl elongation). The method is also useful as a functional test for identifying a phenotype associated with perturbing a gene. The histone deacetylase genes are useful for altering the development of an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MEFWGVAVTPKNATKVTPEEDSLVHISQASL-DCTVKSGESVVLSVTVGGAKLVIGTLSQ 59
                                                                                                                                                                                                                                                                             Amino acid sequence of a histone deacetylase designated AtHDA2A.

This enzyme responsible for removing acetyl modifications, may be localised to promoters targeted for repression by other proteins that associate with HD and specifically bind requiatory elements in promoter DNA. The HD nucleotide sequence can be used for producing transpenic plants with increased disease resistance. Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are regulated by histone deacetylase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New deacctylase genes, used for producing transgenic plants which have increased disease resistance

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   belonging to family 2, ZmHD2. This enzyme responsible for removing acetyl modifications, may be localised to promoters targeted for repression by
producing transgenic plants with increased disease resistance.
Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New deacetylase genes, used for producing transgenic plants which have increased disease resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             121 VTANGNAGAAVVKADTKPKAKPAEVKPAEEKPESDEEDESDDEDESEED--DDSEKGMDV 178

other proteins that associate with HD and specifically bind regulatory elements in promoter DNA. The HD nucleotide sequence can be used for producing transgenic plants with increased disease resistance. Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are regulated by histone deacetylase.

                                                                                                                                                                                                                                        g
```

The present sequence is maize histone deacetylase encoded by HD cDNA

```
Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter;
belonging to family 2, ZmHD2. This enzyme responsible for removing acety modifications, may be localised to promoters targeted for repression by other proteins that associate with HD and specifically bind regulatory elements in promoter DNA. The HD nucleotide sequence can be used for producing transgenic plants with increased disease resistance. Additionally, compositions find use in screening for toxins that affect pathogenicity and in determining which disease response promoters are regulated by histone deacetylase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61 KFPQISFDLVFDKEFELSHSGTKANVHFIGYKS--PNIEQDDFTSSDDEDV-PEAVPAPA 117

FKBP46 is a novel insect cell nuclear immunophilin, which can be used to study and identify additional immunosuppressive drugs that bind to it. Such immunosuppressive agents can be used in treating transplant and tissue graft patients.

Sequence 12.3 Application US/09282305

Patent No. 6287843

GENERAL INFORMATION:
APPLICANT: Baldwin, Donald A.
APPLICANT: Baldwin, Steven P.
TITLE OF INVENTION: Maize Histone Deacetylases And Their Uses
TITLE OF INVENTION WHER: US/09/282,305

CURRENT APPLICATION NUMBER: US/09/282,305

CURRENT PILING DATE: 1999-03-31

PRIOR FILING DATE: 1998-04-03

NUMBER OF SEQ ID NOS: 18

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 12

LENGTH: 305

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
